February 2007

**Tech Session** March 10 at my home 1107 Main St. HB to prep your car for Las Vegas and work on an exhaust leak for Patricia McWalters. Let's do fluids and any other minor repairs you seek while the lift is open.

**Las Vegas is soon upon us so make your reservations now. Read your POCA newsletter.**

**Irwindale Speedway** with Foothill chapter promises a fun filled day with a chance to drive the Speedway in a parade of Panteras. Let's show everyone how to really drive these old cars.

**Track Time.** Sign up with Jim Saxton 626 285-2024 now for next **Willow Springs** on Mar 3-4. Let him know if you want to run on the **Button Willow** track too. It is sometimes used by PCNC so they are surely invited. ORR guys can sort out their cars.

**Las Vegas convoy** begins at 9:00AM at Burger Town located near the fwy 10/Archibald off ramp just before the hwy 15 to LV. Two convoys are scheduled for the run...one on Wednesday and one on Thursday.

Mar 3-4 **Willow Springs Open Track** sponsored by Jim Saxton 626 285-2024. West Coast Racing featuring Panteras and Ferraris invites you to run all makes & models at speed on the Willow Springs road racetrack in Rosamond, just north of Lancaster. Jim and Cherie Saxton host both Pantera and Ferrari clubs for this two day event twice a year. TPOC helps registration on the 3rd as a fundraiser (please volunteer). So, bring your car and experience the fastest track in the west (often the site of new car testing as seen on Speed TV). The cars are divided into 4 classes based on your skill level from pro to novice (instructors provided) and car preparation. Or, come and make the TPOC treasury grow by helping with the registration and enjoy watching some very fast, expensive cars race.

**Newsletters** are posted on the web site in its own section for those who would like to see the color photos contained herein. Mailed newsletters are typically in b/w to reduce costs. Please let Judy know if you'd like to get your newsletter via email, by post or both.

**Please** send any changes to Judy McCartney at [jpoca2@hotmail.com](mailto:jpoca2@hotmail.com) 'cause we're considering sending a TPOC roster to you. Check your phone numbers, email address and most importantly your associate's name. Oops, it's not normally listed but we do want it for our database anyway. ***Then tell us what info you'd like to include or exclude in the roster to all our chapter members. I'm considering placing all the info into a TPOC directory for you. Is privacy a concern?***

**Just ask Phyllis** if you would like a free TPOC badge. We urge each of the 93 members to wear them proudly.

**Write an article** of your own and submit it to Mike Drew or Jack Deryke.

### **Bogus Boss**

What would I do if I blew my 351C 2V engine? Well, I can hardly imagine having a Boss 302 in my Pantera. This killer TransAm monster twisted quickly for any road course.

While reading some old *Hot Rod* magazine articles, I found that I may save those heads to build my Bogus Boss. Luckily, my brother-in-law allows me to hold down my garage floor with his '66 289 and he didn't use his '73 302 crank in building his street Mustang or should I forgo it for a steel one. Cross drill the crank for more oil. Add Roush 2 bolt main saddles for extra strength. Cam it with slightly more than 290 degrees. Get some 11.5:1 lightweight slugs for std or slight overbore for my close chamber 64cc 4V heads. Use 289 or 302 HP rods C9ZZ6200B with 3/8 rod bolts. With the open chamber 2V 74cc heads I'll use the 11:1 pistons for an 8.8:1 static. Restrictor plugs limit the oil flow to the cam to have longer time for the mains. Elongate the mains' holes to hold more oil and open to 3 holes in the top bearing inserts similar to that recommended by Chevy for their HP engines. Skip the high volume or high pressure oil pump but blueprint the stocker. Reduce oil blowout with threaded plugs. Mill out the dampener weight. Back the engine a 22 pound steel flywheel. The objective is to have a very light rotating assembly that is internally balanced.

Modify the heads by drilling 1 inch holes to notch and plug the stock water passages front and back with a disc and silicon. Using a Boss 302 gasket mark and open new 11/16 water passages near the front intake ports. Get Boss push rods, guide plates, valve springs and rocker studs. Keep the Cleveland roller rocker arms for the 2.19/1.71 valves with 3 angle cuts. Oh how they breathe!

Feed them with matching Cleveland intake manifold with 650-850cfm holley depending on how well the engine is prep'd. A 7-8 quart pan covers the windage tray.

So don't throw away your old heads. Send them to me.

**TPOC Roster** is under consideration. Would you like to have contact information of the chapter members? Is so, what information would you like printed?
